to the

PHILOSOPHICAL TRANSACTIONS

FOR THE YEAR 1813.

A

ACID, liquid fluoric, discovered by Scheele, description of it, 

an account of some experiments undertaken to electrize it, 

Acids, remarks on their influence upon the composition of the urine, 

Alcohol, remarks on the state in which it exists in fermented liquors, 

Alcohol of sulphur, or Sulphuret of carbon, experiments on it, 

preparation and general properties of it, 

experiments to ascertain whether hydrogen be present in it, 

experiments to ascertain the presence of carbon in it, 
 particulars respecting the mode in which the proportions of sulphur and carbon in it are established, 

Ancon, a term applied to a new variety in the breeds of sheep, 

Ardea Argala, a description of its solvent glands and gizzard, 

Artery, branchial, observations on its structure 

Austin, Rev. Gilbert. On a new construction of a condenser and air pump, 

Azote and chlorine, a new substance formed by their combination, 

B

Babington, Dr. His letter to Sir Everard Home on the subject of concretions of olive oil and mucus found in the human intestines,

INDEX.

Bakerian Lecture, on the elementary particles of certain crystals, 51
Berzelius, J. M. D. His experiments on the alcohol of sulphur, or sulphuret of carbon, 171
His appendix to a paper on the alcohol of sulphur, or sulphuret of carbon, 188
Bile, has a power of converting animal substance into fat, 155
Blagden, Sir Charles. His appendix to Mr. Ware's paper on vision, 110
Brande, William Thomas, Esq. His additional remarks on the state in which alcohol exists in fermented liquors, 82
His additional observations on the effects of magnesia in preventing an increased formation of uric acid, with remarks on the influence of acids upon the composition of the urine, 213
His experiments to ascertain whether an admixture of bile had any effect upon the process of converting animal substance into fat, 154
Brentford, Middlesex, an account of some organic remains found near that place, 131
Brewster, David, LL.D. On some properties of light 101

C
Casowary, long-legged, from New South Wales, description of its solvent glands and gizzard, 79
Cassegrainian telescope, its light compared with that of the Gregorian, 206
Casaurius Emu, description of its solvent glands and gizzard, 78
Chemical combination, observations on the atomic doctrine of it, 190
Chlorine and azote, a new substance formed by their combination, 2
Chromate of lead, on the double refraction of it, 105
Clanny, William Reid, M. D. On the means of procuring a steady light in coal mines without the danger of explosion, 200
Concave glasses, the bad effects resulting from the use of them described, 33
Condenser and air pump, on a new construction of them 138
Cotes's theorem, a remarkable application of it, 8
Cryophorus, description of an instrument so called, 73
Crystalline humour, indispensably necessary to enable the eye to see at different distances, 44
INDEX.

Crystals, on the elementary particles of certain, - 51
— on the existence of two dispersive powers in all doubly refracting, - 107
Cube, origin of its form in crystallography, - 59

D

DAVY, SIR HUMPHRY, LL.D. On a new detonating compound, - 1
---------- Some further observations on a new detonating substance, - 242
---------- His experiments and observations on the substances produced in different chemical processes on fluor spar, - 263
Diamond, on substances which possess a higher refractive power, - 106

E

Elephant, organic remains of that animal found near Brentford, Middlesex, - 134

F

Fat, on its formation in the intestines of living animals, - 146
Flour spar, some experiments and observations on the substances produced in different chemical processes on it, - 263
Fluoric combinations, the different hypotheses which may be formed on their nature, - 267
—— principle, various attempts to procure it in a pure form - 275
Fluoric compounds, a peculiar substance exists in them, which it is difficult to examine in a pure form, - 278
Florine, a name given to a peculiar substance existing in floric compounds, - 278
Freezing at a distance, on a method of, - 71

G

Gas, silicated fluoric acid, discovered by Scheele, description of it, - 265
—— fluo-boric acid, discovered by Gay Lussac and The
nard, description of it, - 266
Glands, bronchial, on the black colouring matter of them, - 159
—— gastric, experiments to ascertain the coagulating power of their secretion, - 96
### INDEX

#### H

**Herschel, J. F. W. Esq.** On a remarkable application of Gotes's theorem, 

**Hippopotamus, organic remains of that animal found near Brentford, Middlesex**, 

**Home, Sir Everard, Bart.** His description of the solvent glands and gizzards of the Ardea Argala, the Casuarius Emu, and the long-legged Casowary from New South Wales, 

---

His experiments to ascertain the coagulating power of the secretion of the gastric glands, 

---

On the tusks of the narwhale, 

---

On the formation of fat in the intestines of living animals, 

---

His additions to an account of the anatomy of the Squalus Maximus contained in a former paper; with observations on the structure of the branchial artery; 

**Hooke, Dr.** His account of the formation of certain crystals referred to, 

**Humphreys, Col. David.** On a new variety in the breeds of sheep, 

#### K

**Kater, Captain Henry.** On the light of the Cassegrainian telescope, compared with that of the Gregorian, 

#### L

**Lamp,** description of one to be used in coal mines, 

**Lecture,** the Bakerian, on the elementary particles of certain crystals, 

**Light,** on some properties of it, 

**Lungs,** on the colouring matter of the black spots on them, 

#### M

**Magnesia,** additional observations on its effects in preventing an increased formation of uric acid, 

**Marget, Alexander, M. D.** His experiments on the alcohol of sulphur, or sulphuret of carbon, 

---

His experiments on the production of cold by the evaporation of the sulphuret of carbon,
INDEX.

**Micrometer**, description of one with a single lens,  
**Mines, coal**, on the means of procuring a steady light in them  
without the danger of explosion,  
——— explosions in, a few of the most considerable in  
the neighbourhood of Durham recorded,  

\[ \text{page} \quad \text{119} \]

\[ \text{page} \quad \text{200} \]

\[ \text{page} \quad \text{201} \]

**N**

**Narwhale**, on the tusks of that animal,  
**Near sightedness** usually commences between the ages of ten  
and eighteen,  
——— affects the higher classes of society more than  
the lower,  
——— sometimes occasioned by an evident change  
in the spherical figure of the cornea,  
——— seldom alike in the two eyes,  
——— has no dependence on the greater or smaller  
degree of convexity possessed by the cornea,  
——— not necessarily occasioned by a morbid pro-  
trusion of the whole eye,  

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{31} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

**O**

**Observations** of some principal fixed stars, results of them,  
——— **β Ursæ Minoris**,  
——— **β Cephei**,  
——— **α Ursæ Major**,  
——— **α Cephei**,  
——— **α Cassiope**,  
——— **γ Ursæ Major**,  
——— **γ Draco**,  
——— **η Ursæ Major**,  
——— **α Persei**,  
——— **Capella**,  
——— **α Cygni**,  
——— **α Lyrae**,  
——— **Castor**,  
——— **Pollux**,  
——— **β Tauri**,  
——— **α Cor. Bor.**,  
——— **α Arietis**,  
——— **Arcturus**,  
——— **Aldebaran**,  
——— **β Leonis**,  

\[ \text{page} \quad \text{285} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

\[ \text{page} \quad \text{ib.} \]

Octohedron, the most common form of crystallized bodies, - 51
Olive oil, concretions of it found in the human intestines, - 150

---

**P**

Pearson, George, M.D. On the colouring matter of the black bronchial glands, and of the black spots of the lungs, - 159

Pond, John, Esq. Astronomer Royal. His observation of the summer solstice of 1812, at the Royal Observatory, - 27

His catalogue of north polar distances of some of the principal fixed stars, - 75

His observation of the winter solstice of 1812, with the mural circle at Greenwich, - 123

His catalogue of north polar distances of eighty-four of the principal fixed stars, deduced from observations made with the mural circle at the Royal Observatory, - 280

Observations of the summer solstice of 1813, with the mural circle, at the Royal Observatory, - 304

Prechtl, M. His theory respecting various crystalline forms referred to, - 62

Prisms, hexagonal, origin of their form in crystallography, - 59

---

**R**

Rhea Americana, description of its solvent glands and gizzard, - 80

Rhomboid, obtuse, origin of its form in crystallography, - 57

---

**S**

Sheep, on a new variety in their breed, - 88

Sight, observations relative to the near and distant sight of different persons, - 31

Smithson, James, Esq. On a substance from the elm tree called ulmin, - 64
INDEX.

Smithson, James, Esq. On a saline substance from Mount Vesuvius, 256

Solstice, summer, observation of that of 1812, at the Royal Observatory, 27

—— observation of that of 1813, at the Royal Observatory, 298

—— winter, observation of that of 1812, with the mural circle at Greenwich, 123

Spheres, perfect, supposed to be the elementary particles of fluor spar and such other substances as assume the octahedral and tetrahedral forms, 54

Squalus Maximus: additions to an account of its anatomy contained in a former paper, 227

Stars, principal fixed, catalogue of north polar distances of some of them, 75

—,— catalogue of north polar distances of eighty four of them, 281

Struthio Camelus, description of its solvent glands and gizzard, 80

Sulphuret of carbon, or Alcohol of sulphur, experiments on it, 171

— experiments to determine the proportions of sulphur and carbon contained in it, 182

— comparison of the proportions of sulphur, and carbon in it, with those which might be inferred from the laws of determinate proportions, 189

— experiments on its combination with the alkalies, the earths, and the metallic oxyds, 192

— experiments to determine the nature of a particular substance produced by the action of nitro-muriatic acid upon it, 195

— experiments on the production of cold by the evaporation of it, 252

T

Tetrahedron and octahedron, relation of these solids to each other in crystallography, 51

Trimmer, Mr. William Kirby. His account of some organic remains found near Brentford, Middlesex, 131

Tycho L. Tychohnius. His account of a narwhale's skull, published in 1706, referred to, 127

U

Ulmim, on a substance from the elm tree, so called, 64
INDEX.

Ulmin, English, experiments on it,  -  -  68
Vesuvius, Mount, on a saline substance from it,  -  -  256
Vision, an appendix to Mr. Ware's paper on that subject,  -  -  110
Vitreous humour, its absorption probably the cause of amended
vision in old persons,  -  -  -  42

W

Ware, James, Esq. His observations relative to the near
and distant sight of different persons,  -  -  -  31
Wires, on a method of drawing them extremely fine,  -  -  -  114
Wollaston, William Hyde, M.D. Bakerian lecture, on
the elementary particles of certain crystals,  -  -  -  51

______________ On a method of
freezing at a distance,  -  -  -  -  71
______________ Method of drawing
extremely fine wires,  -  -  -  -  114
______________ His description of
a single lens micrometer,  -  -  -  -  112

CORRIGENDA.

Page 175, line 13, for one-fourth—read one-third
177,  -  -  17, for preponderates over that of either the olive oil or phosphorus—
read be exceeded by that of the alcohol of sulphur.
246,  -  -  10, after attraction of—add the azote of
249,  -  -  23, for produced—read produced,—and dele the comma after portion
249,  -  -  11, for 261.—read 268.
264,  -  -  18, for the other—read the other of which
268,  -  -  15, for bases,—read basis
273,  -  -  11, for metal, positively electrified—read metal positively electrified.

From the Press of
W. BULMER & Co.
Cleveland-rows, St. James's,
London.
