The Committee appointed by the Royal Society to direct the publication of the Philosophical Transactions, take this opportunity to acquaint the Public, that it fully appears, as well from the council-books and journals of the Society, as from repeated declarations which have been made in several former Transactions, that the printing of them was always, from time to time, the single act of the respective Secretaries, till the Forty-seventh Volume: the Society, as a Body, never interesting themselves any further in their publication, than by occasionally recommending the revival of them to some of their Secretaries, when, from the particular circumstances of their affairs, the Transactions had happened for any length of time to be intermitted. And this seems principally to have been done with a view to satisfy the Public, that their usual meetings were then continued, for the improvement of knowledge, and benefit of mankind, the great ends of their first institution by the Royal Charters, and which they have ever since steadily pursued.

But the Society being of late years greatly enlarged, and their communications more numerous, it was thought advisable that a Committee of their members should be appointed, to reconsider the papers read before them, and select out of them such as they should judge most proper for publication in the future Transactions; which was accordingly done upon the 26th of March, 1752. And the grounds of their choice are, and will continue to
be, the importance and singularity of the subjects, or the advantageous manner of treating them; without pretending to answer for the certainty of the facts, or propriety of the reasonings, contained in the several papers so published, which must still rest on the credit or judgment of their respective authors.

It is likewise necessary on this occasion to remark, that it is an established rule of the Society, to which they will always adhere, never to give their opinion, as a Body, upon any subject, either of Nature or Art, that comes before them. And therefore the thanks, which are frequently proposed from the Chair, to be given to the authors of such papers as are read at their accustomed meetings, or to the persons through whose hands they received them, are to be considered in no other light than as a matter of civility, in return for the respect shewn to the Society by those communications. The like also is to be said with regard to the several projects, inventions, and curiosities of various kinds, which are often exhibited to the Society; the authors whereof, or those who exhibit them, frequently take the liberty to report, and even to certify in the public news-papers, that they have met with the highest applause and approbation. And therefore it is hoped, that no regard will hereafter be paid to such reports and public notices; which in some instances have been too lightly credited, to the dishonour of the Society.
CONTENTS.

I. The Croonian Lecture. On the conversion of Pus into granulations or new Flesh. By Sir Everard Home, Bart. V. P. R. S. p. 1

IV. On Corpora Lutea. By Sir Everard Home, Bart. V. P. R. S. p. 59

V. Remarks on the probabilities of error in physical observations, and on the density of the earth, considered, especially with regard to the reduction of experiments on the pendulum. In a letter to Capt. Henry Kater, F. R. S. By Thomas Young, M. D. For. Sec. R. S. p. 70

VI. On the anomaly in the variation of the magnetic needle as observed on ship-board. By William Scoresby, jun. Esq. Communicated by the Right Hon. Sir Joseph Banks, Bart. G. C. B. P. R. S. p. 96

VII. On the genus Ocythoe; being an extract of a letter from Thomas Say, Esq. of Philadelphia, to Wm. Elford Leach, M. D. F. R. S. p. 107
VIII. On Irregularities observed in the direction of the Compass Needles of H. M. S. Isabella and Alexander, in their late Voyage of Discovery, and caused by the attraction of the iron contained in the Ships. By Captain Edward Sabine, of the Royal Regiment of Artillery, F. R. S. &c. p. 112

IX. Some observations on the formation of Mists in particular situations. By Sir H. Davy, Bart. F. R. S. V. P. R. I. p. 123

X. Observations on the Dip and Variation of the Magnetic Needle, and on the Intensity of the Magnetic Force; made during the late voyage in search of a North West Passage. By Captain Edward Sabine, of the Royal Regiment of Artillery, F. R. S. and F. L. S. 132

Meteorological Journal for 1818, kept at the Apartments of the Royal Society.
The President and Council of the Royal Society adjudged the Medal on Sir Godfrey Copley's Donation, for the year 1818, to Robert Seppings, Esq. for his Papers on the Construction of Ships of War, printed in the Philosophical Transactions; and the Gold and Silver Medals on the Donation of Benjamin Count of Rumford, to David Brewster, LL. D. F. R. S. for his Discoveries relating to the Polarisation of Light.
