INDEX

TO THE

PHILOSOPHICAL TRANSACTIONS

FOR THE YEAR 1883.

A.

Abel's theorem, 323 (see Forsyth).
Algonarians, ciliated groove in the stomodeum of, 693.
Animals, composition of; fed and slaughtered as human food, 865 (see Lawes).
Auerbach, discussion of experiments of, 163.

B.

Bakerian Lecture, 891 (see Crookes).
Didelostoma, 394 (see Parker).
British Association unit of electrical resistance, 173, 223, 252, 295.

C.

Calamites, 465.
Carpenter (P. H.). On a New Crinoid from the Southern Sea, 919.—Postscript, 930; description of the figures, 933.
Carpenter (W. B.). Researches on the Foraminifera—Supplemental Memoir. On an Abyssal type of the Genus Orbitolites;—a Study in the Theory of Descent, 551.—Orbitolites tenuissima, 553; 6 K 2
geographical, bathymetrical, and geological distribution, 558; relation to other Orbitoline types, 559; evolutionary history of the Orbitoline type, 567; theory of descent, 569; explanation of plates, 571.

Coal-Measures, fossil plants of, 459 (see Williamson).

Compass, change in the deviations of, on a change of magnetic latitude, 615.

Crinoid, new, from the Southern Sea, 919.

Critical velocity, separating direct from sinuous motion in liquids (see Reynolds).

Croonian Lecture (see Martin).

D.

Dadoxylon, 469.

Darcy’s experiments discussed, 977.

De la Rue (W.) and Müller (H. W.). Experimental Researches on the Electric Discharge with the Chloride of Silver Battery.—Part IV. Tube potential, 477 (for index see p. 516).

Descent, theory of, 569.

Dewar (J.) and Liveing (G. D.), 187 (see Liveing).

Dodds (J. M.) and Glazebrook (R. T.), 223 (see Glazebrook).

E.

Eddies, circumstances determining the formation of (see Reynolds).

Elasticity (see Tomlinson).

Electric discharge in rarefied gases, 477 (see De la Rue).

Electrical motions in a spherical conductor, 519.

Electrical resistance, 173, 223, 252, 295 (see Rayleigh and Glazebrook).

Electricity, comparison of the electrostatic and electrodynamic units of, 707.

F.

Foraminifera, 551 (see Carpenter).

Forsyth (A. R.). On Abel’s Theorem and Abelian Functions, 323.—Contents of the paper described, 323; Section I, 324; Section II., Abelian functions after Weierstrass, 347.

Fossil plants of the Coal-Measures, 459 (see Williamson).

G.

Gardiner (W.). On the Continuity of the Protoplasm through the Walls of Vegetable Cells, 817.—Pit membrane, nature of, 827; pulvini, structure of, 830; additional note, 858; description of plates, 859.

Gilbert (J. H.) and Lawes (Sir J. B.) (see Lawes).
INDEX.

GLAZEBROOK (R. T.) and SARGANT (E. B.). Experiments on the Value of the British Association Unit of Resistance.—Part II., 252.

Glucinum, atomic weight of, 601.

H.

Hag-fish, 376 (see Parker).

Halonias, 466 (see Williamson).

Heart, influence of temperature on rate of, 663 (see Martin).

HICKSON (S. J.). On the Ciliated Groove (Siphonoglyphe) in the Stomodœum of the Aleyonarians, 693.

HUMPHIDGE (T. S.). On the Atomic Weight of Glucinum (Beryllium) 601.

L.

LAMB (H.). On Electrical Motions in a Spherical Conductor, 519.

Lampréy, 412 (see Parker).

LAWES (Sir J. B.) and GILBERT (J. H.). Supplement to former Paper. Experimental Inquiry into the Composition of some of the Animals Fed and Slaughtered as Human Food—Composition of the Ash of the Entire Animals, and of certain Separated Parts, 865.

Leptodendroid plants, 465 (see Williamson).

Leptogorgia, 735, 754, 768, 778.

LIVING (G. D.) and DEWAR (J.). On the Ultra-Violet Spectra of the Elements, 187.—Part I. Iron (with a map), 187; Part II., spectra of fifteen metals, and of carbon, 213.

LORENZ, experiments by his method for the determination of the absolute value of the B.A. unit of resistance, 295 (see Rayleigh).

M.

Marsipobranch fishes, skeleton of the, 373 (see Parker).

Martin (H. N.) The Croonian Lecture.—The Direct Influence of Gradual Variations of Temperature upon the Rate of Beat of the Dog's Heart, 663—The method, 666; detailed results of experiments, 674; conclusions, 686; references, 688.

Melilotia, 583 (see Ward).

Mercury, specific resistance of, for electricity, 173.

Molecular forces, experiments bearing on the distance to which they may be sensible, 645 (see Reinoïd).

Müller (H. W.) and De La Rue (W.) (see De La Rue).

Myxinoïd fishes, 373 (see Parker).

O.

Orbitalites, 551 (see Carpenter).

Owen (R.). On the Affinities of Thylococoe, 575.

Pelvic characters of Thylococoe Carnifex, 639.
INDEX.

P.

Palladium, Volatile alloy of, with hydrogen, 482 (see De La Rue).

Paraffins, on the normal, 269.

Parker (W. K.) On the Skeleton of the Marsipobranch Fishes.—Part I. The Myxinoids (Myxine and Bdelostoma), 373.—Hag Fish (Myxine glutinosa), 376; Bdelostoma, 394; summary and conclusion of Part I, 403; description of the plates, 407. Part II. Petromyzon, 411; embryo of Petromyzon, 439; summary and conclusion, 450; description of the plates, 454.

Pitch, determination of the, of a standard tuning-fork, 316.

Protozoon, continuity of, through the walls of vegetable cells, 817 (see Gardiner).

Psaronius, 464 (see Williamson).

Pulvinus, structure of, 830.

R.

Rayleigh (Lord) and Sidgwick (Mrs. H.). Experiments, by the Method of Lorentz, for the further Determination of the Absolute Value of the British Association Unit of Resistance, with an Appendix on the Determination of the pitch of a Standard Tuning-Fork, 295.—Appendix, 316; second appendix, effect of imperfect insulation of coils, 321.

Rayleigh (Lord) and Sidgwick (Mrs. H.). On the Specific Resistance of Mercury, 178.

Reinold (A. W.) and Rücker (A. W.). The Limiting Thickness of Liquid Films, 645; electrical experiments, 646; optical experiments, 652; summary of results, 660.

Renilla, development of, 723 (see Wilson).

Resistance, electrical, of mercury, 173 (see Rayleigh); value of the British Association unit of, 223, 295 (see Glazebrook and Rayleigh).

Reynolds (O.). An Experimental Investigation of the Circumstances which Determine whether the Motion of Water shall be Direct or Sinuous, and of the Law of Resistance in Parallel Channels, 935.—Section I., introductory, 935; Section II., experiments in glass tubes by means of colour bands, 949; Section III., experiments to determine the critical velocity by means of resistance in the pipes, 957; Section IV., application to Darcy’s Experiments, 977.

Rücker (A. W.) and Reinold (A. W.) (see Reinold).

S.

Sargant (E. B.) and Glazebrook (R. T.), 252 (see Glazebrook).

Scheelemer (C.) and Thorpe (T. E.). On the Normal Paraffins.—Part IV., 269.

Sidgwick (Mrs. H.) and Rayleigh (Lord) (see Rayleigh).

Socotra, on a collection of rock specimens from, 273.

Spectra, ultra-violet, of the elements, 187 (see Living).

Spectroscopy by radiant matter, 891 (see Crookes).

Sporocarp, 469 (see Williamson).

Stewart and Schuster, discussion of experiments of, on the electrical resistance of copper by magnetization, 157.

Stress and strain, effect of, on the action of physical forces, 1 (see Tomlinson).
INDEX.

T.

**Thaumatoorinus renovatus**, 919.

**Thomson (J. J.).** On the Determination of the Number of Electrostatic units in the Electromagnetic Unit of Electricity, 707.

**Thorpe (T. E.) and Schorlemmer (C.)** (see Schorlemmer).

**Tomlinson (H.).** The Influence of Stress and Strain on the Action of Physical Forces, 1.—Part I. Moduli of elasticity, 2; Young's modulus, 2; Hooke's law, 12; discussion of Wernheim's experiments on elasticity, 14; effect of permanent torsion combined with traction, 17; effects of permanent torsion and elongation on the modulus of rigidity, 24; elasticity of volume, 29; permanent alteration of density produced by longitudinal traction, 30; relation between moduli of elasticity and intermolecular distance, 32; influence of an electric current and of magnetism on the torsional rigidity of metals, 33; critical points, 36; summary of Part I., 36. Part II. Electrical conductivity, 39; temporary alteration of electrical conductivity produced by longitudinal traction, 39; influence of permanent extension on the same, 64; effect of compression on electrical conductivity, 65; of stress applied in a direction transverse to that of the current, 66; of stress applied equally in all directions, 70; permanent alteration of resistance produced by longitudinal traction, 78; critical points, 80; permanent alteration of specific resistance caused by stress, 96; alteration of specific gravity produced by permanent extension, hammering, and permanent torsion, 107; effect of cooling suddenly on the specific resistance of steel, 109; recovery of electrical conductivity produced by time in wires which are in a state of strain, 110; influence of permanent strain on the change of electrical conductivity produced by alteration of temperature, 112; further discussion of Wernheim's experiments on elasticity, 128; alteration of electrical conductivity produced by magnetization, 133; effect of temporary stress on the same, 137; effects of permanent longitudinal extension, of torsion, and of tempering on the same, 141; attempt to determine relations between the alteration of electrical resistance produced by any magnetizing force, the force itself, and the magnetism induced by the force, 142; effect of altering the strength of the bridge current on the change of resistance produced by any magnetizing force, 146; effect of longitudinal magnetization on electrical resistance, 148; discussion of Stewart's and Schuster's experiments on the alteration of the electrical resistance of copper by magnetization, 157; effect of annular magnetization on electrical resistance, 160; discussion of Auerbach's experiments, 163; remarks on the alteration of resistance which is produced by magnetization, 166; relation between the rotational coefficient of metals and the alteration of resistance produced by mechanical stress, 167; relation between electrical resistance and viscosity, 168; summary of Part II., 169.

**Thylacoleo**, 575, 639 (see Owen).

U.

**Unit of electrical resistance**, 173, 223, 295 (see Rayleigh and Glazebrook).

V.

**Viscosity**, relation between, and electrical resistance, 168.

W.

**Ward (H. M.).** On the Morphology and Development of the Perithecium of Meliolia, a Genus of Tropical Epiphyllous Fungi, 583; description of plates, 597.
WEIERSTRASS, Abelian functions after him, 347 (see Forsyth).

Wertheim, experiments of, on elasticity discussed, 14, 128.

Williamson (W. C.). On the Organization of the Fossil Plants of the Coal-Measures.—Part XII, 459.—Psaronius Renaultii, 464; Zygosporites, 464; Calamites, 465; Lepidodendroid plants, 465; Halonia, 466; Sporocarpon, 469; Dadoxylon, 469; index to the plates, 471.

Wilson (E. B.). The Development of Renilla, 723.—Segmentation of the egg, and formation of the germinal layers, 728; development of organs and tissues, 760; development of the colony, 782; general considerations, 797; appendix, 808; explanation of figures, 808.

Y.

Yttrium, the detection and wide distribution of, 891.

Z

Zygosporites, 464 (see Williamson).
