AN
INDEX
TO THE
Sixty-First VOLUME
OF THE
Philosophical Transactions.

For the Year 1771.

A.

Agnano, its lake is the remains of a volcano, p. 15, 16.
Air, is a non-conductor of electricity, p. 649. Plate of, electrified, p. 673.
Alchborne, Mr. Staneby, his account of the fifty Chelsea plants for 1770, p. 390, &c.
Aphides, a numerous class of insects, p. 183. Description of those growing on the rose trees, p. 184. Viviparous in the spring and summer, and oviparous at the end of the
the year, p. 185. Their increase by successive generations, p. 186, 187. No males but in the last brood, p. 188. Their copulation, 190, 191. Produce of their eggs, p. 192. Their prodigious fecundity, p. 193.

Allegatis, a Phoenician deity, p. 346. The same with Dagon, ibid.

Athens, no copper coined there before the end of the Peloponnesian war, p. 469. Coined no gold, p. 471.

Attic drachm, heavier than the denarius, p. 463, 528. Was both a piece of money and a weight, p. 468. Was the most famous for fineness and justness, p. 469. Its weight, p. 480, 483. Its worth, p. 523. Lowered when Greece was reduced by the Romans, p. 530.

Attraction and repulsion of electrified bodies accounted for, p. 653.

As, Etruscan, struck at Volaterra, p. 85, 86.

As, Roman, its value, p. 519.

Avernus, the lake, had formerly a communication with the sea, p. 28. Fills the bottom of the crater of a mountain produced by explosion, p. 32.

Aurum Mosaicum, a preparation of tin described by Mr. Woulfe, p. 114, 115.

B.

Babylonian talent, its weight, p. 488.

Barbaro or Gauro, a mountain formed by an eruption, p. 31.

Barker, Thomas, Esq; observations on the quantities of rain at Lyndon in Rutlandshire, p. 221, 227, &c.

made in North Wales, to ascertain the quantities of rain, at different heights, p. 294.

Basalt rocks in Hassia, p. 580. Their nature, p. 581. Probably the produce of volcanoes, p. 582.

Bataavia, its latitude and longitude determined, p. 435.

Beccaria, Mr. John Baptifl, his experiments with Mr. Canton's phosphorus, p. 212.

Bergius, Professor Jonas, description of a new plant from the East Indies, p. 289, 290.

Bivalve insects, distinct from bivalve shell-fish, p. 30.

Borlase, Dr. William, meteorological observations for 1770, p. 195.

Bracini, his account of the crater of Vesuvius before the eruption of 1631, p. 11.

Bufofo, a wild ox, native of Tuscany, p. 84.

Calculation of solar eclipses very operative in the common manner, p. 437. Simplified by Kepler, ibid. Demonstrated and extended by Dr. Pemberton, p. 438, &c.

Cam, the river, not frozen by a remarkable degree of cold, p. 213.

Cambridge, observations made on a remarkable cold there, p. 213, 214, &c.

Canton, Mr. John, experiments made with his phosphorus, p. 212.

Caprea, island of, not formed by eruption, p. 14.

Carp, whether only a fresh-water fish, p. 311. How to manage them properly, p. 313. Which are the best for breeding, p. 316. Manner of their spawning, p. 317. Mix with other fish, and produce mules, p. 318. Quickness of their growth, p. 321. How to be fed in cellars, p. 323. Will live a great while out of water, p. 324.

Cruftans, the same fish with the rud or fin-scale, p. 318.
INDEX.

Chaleux, disputes about its value, p. 470.

Chelsea fifty plants of the garden for 1770, p. 390.

Chinese stoves, described by Father Gramont, p. 61, &c. Their general construction, p. 62, 63. Their differences, ibid. Their advantages, p. 67.

CochinChina, a map of that kingdom, and of Cambodia, undertaken by Father Loreyro, p. 59, 60.

Coins, Greek and Roman, examined, p. 462.

Coin, a Punic, described by Mr. Swinton, 78. With the Latin monogram vab (vabar), p. 79. Siculo-Punic explained by Mr. Swinton, 91.

Coins struck in Phoenicia before Alexander the Great, p. 345, &c.

Colors, particular transmitted to, and reflected by, Mr. Canton's phosphorus, p. 312.

Comet, new, observed at Paris, by Mr. Meffier, p. 104. Its elements by Mr. Pingré, p. 106.

Compass, its variation observed in the South Seas, p. 422.

Conductors in electricity distinguished from non-conductors, p. 642.

Genghis Roman, its measure, p. 494, 495.

Consular silver, its inequalities among the Romans, p. 595.

INDEX.

Elden hole, a remarkable cavern in Derbyshire, p. 251, &c.

Electricity explained by means of an elastic fluid, p. 584.

Comparison of the theory with experiment, p. 649.

Epsilon, Greek, its ancient form, p. 99.

Equatorial telescope, invented and described by Mr. Nairne, p. 107. Its uses, p. 109, &c.

Eruptions of lavas, their dates may be in some measure ascertained by the strata of good mould lying between different beds of pumice stones, p. 6.

Etna, an eruption of this mountain at hand, p. 42.

Etruscan letters, the first alphabetical in Italy, p. 88.

Euboic talent, came from Asia, p. 486. Its proportion to the Attic, p. 486.

Falernian wine where produced, p. 32.

Einheits, assignable by arcs of Conic Sections, how to be computed, p. 293.

Folls, what it was, p. 515.

Forster, Mr. John Reinhold, on the management of carp in Polish Prussia, p. 310.

Garden, Dr. his account of a new turtle sent over by him from South Carolina, p. 267.

Generation, insufficiency of the systems on, p. 193, 194.

George Island, in the South Seas, its latitude, p. 406.

Gold, its value in Greece and Rome, p. 517. Its proportion to silver in different times, p. 518. 522.
INDEX.

Goruch, Rev. William, Register of mortality for ten years, at Holy Crofs in Salop, p. 57.

Gramont, Father, description of the Chinese stoves, p. 61.

Greaves, his labours on ancient coins analysed, p. 463, 464.

Greeks, had no money at the time of the Trojan war, p. 527.

Green, Mr. Charles, observations at George Island in the South Sea, p. 397. Died at Batavia, p. 421.

Hanly, Dr. Peter, account of a seratomous tumor, p. 131.

Hased, Edward, Esq; on the chestnut tree's being indigenous in England, p. 160.

Heberden, Dr. William, his note on the difference in the quantity of rain at different distances from the earth, p. 297.

Herculaneum, in some parts 120 feet, and in no part less than 70 feet, below ground, p. 3. Covered with the matter of six different eruptions over that which destroyed it, p. 7.

Hornby, Rev. Professor, determination of the sun's parallax from the observations of the last transit of Venus, p. 574.

Horse, running, its price in Greece, p. 528.

Horsley, Rev. Samuel, problems, on the density of a crust composed of spherical particles upon the surface of a globe, p. 558.

Howard, John, Esq; observations on the heat of the ground on Mount Vesuvius, p. 53.
Hunter, Dr. William, his account of the Nyl-gliau, an Indian animal, p. 170.

Ice, its evaporation, p. 329.

Indigenous plants found in several parts of England, p. 359, &c. Difficult to be distinguished, p. 385.

Indigo, used to make the Saxon blue, p. 128, and a yellow die, p. 129.

Inscriptions, given to the observers of the transit of Venus, p. 345.

Iebia, island, formed by eruptions, p. 34. Its baths, p. 35.

Kepler's compendium for computing Solar Eclipses demonstrated and extended, p. 437, &c.

King, Edward, Esq., his observations on the cavern of Elden-hole in Derbyshire, p. 256. His conjecture about a subterraneous river at the bottom of the cavern, p. 258—265.

L.

Lauden, Mr. John, on fluents assignable by arcs of Conic Sections, p. 298.

Lava, a foul vitrified matter, produced by eruptions and very different from the tufa, p. 7.
INDEX.

Leyden vial, its phenomena described, p. 668.
Lloyd, Mr. account of Elden-hole in Derbyshire, p. 251.
Luc, Mr. de, has invented a new method of observing the elevation of places by means of the Barometer, p. 284.

M.

Memel, a town in Sicily, p. 97, 98.
Meffier, Mr. on a new Comet, p. 104.
Mercury, its transit over the Sun observed at Cambridge New England, p. 51.
Meteorological observations at Ludgvan in Cornwall, for 1770, p. 195. At Caen in Normandy by Mr. Pigott, p. 274.

Micrometer, Dollond's, improvement and new applications, p. 536.
Mina, worth a hundred drachms, p. 468.
Moffees, see Vapours.
Mohr, Mr. John Mauritze, observes the transit of Venus at Batavia, p. 433. And that of Mercury, p. 435.
Mole, a new, from North America, described by Mr. Barrington, p. 292.
INDEX

Monro, Dr. Donald, account of the natron from Tripoli, p. 567.

Monte nuovo, accounts of the explosion, which produced it, p. 20-26.

Mountains, how to distinguish those which do, from those which do not, rise by subterraneous fires, p. 13.

Muller, Mr. observations on some bivalve insects near Copenhagen, p. 230.

Museum, British, very rich in ancient coins, p. 463, 467, &c.

N.

Naples, its soil, together with that of the country twenty miles round the production of subterraneous fires, p. 2, 3, &c.

Nonagesimal degree, how to be computed, p. 428, &c.

Nystanthes elongata, a new plant from East India, described by Professor Bergius, 289.

P.

Parallax Solar, deduced from the observations of the transit of Venus, p. 574, &c.

Pemberton, Dr. Henry, Kepler’s method of computing the
the Moon's parallaxes in Solar Eclipses demonstrated and extended, p. 437, &c.
Pennant, Thomas Esq; account of two new tortoises, p. 266.
Persian coins, bear the effigies of the kings, p. 352.
Philippic, its weight, p. 475, &c.
Pigot, Nathanael Esq; his Meteorological observations at Caen in Normandy, p. 274, &c.
Points, effects of, in causing a quick discharge of electricity accounted for, p. 662.
Pompeii, buried ten or twelve feet deep, p. 3. Has felt the effect of one eruption only, p. 4. Which was fatal to many of its inhabitants, p. 4. Covered with a stratum of pumice and burnt matter, and above that with two feet of good mould, p. 5. Its streets were paved with lava, ibid.
Positive electricity, how distinguished from negative, p. 652, 653.
Pound, Roman, its division, p. 492. Its weight, 495.
Pumice stone is marble and alabaster in its infant state, p. 48. Produced from bitumen, p. 49.
Putrefaction, produces a volatile alkali, p. 333. Experiments made to ascertain it, p. 334, 335.

R.

Rain, difference of its quantity at different heights observed in North Wales, p. 294. That quantity depends upon the distance from the earth, and scarcely upon the height of places, p. 296.
Roper, Matthew, Esq; on Greek and Roman coins, p 462.
Raspe, Mr. R. S. account of Basalt-hills in Russia, p. 580.
Richardson, Dr. William, on the Aphides, p. 182.
Roman Soldier's pay, p. 519, &c.
INDEX.

S.

Sagittarius, a new bird from the East Indies, described by Mr. Edwards, p. 55.
Salts, their comparative powers in resisting congelation, p. 218.
Saxon blue, made in the best manner, p. 128.
Sea coals used in China, p. 70.
Sea, formerly reached the mountains between Capua and Caserta, p. 2, 3, &c.
Seeds, whether they can remain many ages in an inert state of fecundity, p. 386.
Segesta, a maritime Sicilian city, p. 93. A Punic coin of that city, ibid.
Shells, several hypotheses on their formation, p. 239.
Skeaton, Mr. John, description of a new Hygrometer, p. 196.
Soil of Naples, produced by explosions, p. 15.
Soft, shelled tortoise described by Dr. Garden, p. 267; and by Mr. Pennant, p. 268, &c.
Solfaterra, formerly a volcano, p. 17. 48. 49. Its ancient name Forum Vulcani, p. 19.
Somma, the Vesuvius of the antients, p. 12. 25. took its rise from the bottom of the sea, p. 13.
Stabia, place where Pliny the elder lost his life, p. 5.
Stamford, in Lincolnshire, its latitude ascertained, p. 238.
Stater, or tetradrachm, the most common Attic coin now remaining, p. 480.
S lethous tumor in the abdomen of a woman, p. 132.
Sips uncialis, Etruscan weight, described by Mr. Swinton, p. 87. 88. Anterior to the regifuge of the Tarquins, p. 89.
2
INDEX.

Sun, its distance from the earth, p. 579.
Swinton, Rev. John, Explication of a Punic or Phœnician coin, p. 78. Remarks upon two Etruscan weights, p. 82. Interpretation of two Punic Inscriptions, p. 91. Observations upon five ancient Persian coins, p. 345.

T.

Talent, contained sixty minas, p. 468.
Talent, its value, p. 523. See Babylonian, Eginæan, Euboic.
Tetradrachm, see Stater.
Thorp, Mr. his Examination of Mr. Barrington’s opinion concerning chestnut trees, p. 152.
Thunder storm, remarkable at St. Keverne, in Cornwall, p. 71, &c.
Tides observed at George Island, p. 428.
Tortoises, two new, described by Mr. Pennant, p. 266.
Transit of Venus, observed at George Island, p. 410. and at Batavia, p. 433. Of Mercury, observed by Mr. Green, and Capt. Cook, in the South Seas, p. 432. at Batavia, p. 435.
Tuberculated tortoise described by Mr. Pennant, p. 271.
Tufa, or Naples stone, composed of pumice ashes, and burnt matter, p. 7. Has taken the impression of the head of an ancient statue dug out at Herculaneum, p. 8.
Lyson, Mr. Michael, account of a singular fish, p. 247.

V.

Vabar. A Carthaginian sea town in Mauritania, p. 79. A coin struck there, while in the possession of the Romans, p. 80.
Vapours, rising from Volcanoes, pernicious to animals, p. 16, 33, 41. Corresponding with fixt air, ibid.
Ventaroli, cold subterraneous winds, p. 35.
Vesuvius, a great channel, through which nature discharges some foul humours of the earth, p. 11. Its cone raised by eruptions, p. 12. Heat of the ground on the mountain, p. 53.
Virgin soil, none near Vesuvius, p. 13.
Volcanoes owe their existence to subterraneous fires, p. 2. Frequently throw up water mixed with the ashes, p. 9. the matter of their eruptions lies very deep, p. 29, 30. their smoke contains a portion of electrical matter, p. 40.

Water, rarefied and turned into an elastic fluid by electricity, 675.
Watson, Professor Robert, on the effects of a remarkable cold, 213.
Willon, Professor, account of a remarkable cold at Glasgow, p. 326.
Wintrop, Professor, his observation of the transit of Mercury in new England, p. 51.
Woulfe, Mr. Peter, experiments on the Aurum Mosaicum, p. 114. Method of dying wool and silk of a yellow colour with indigo, p. 129.
Weights, Etruscan, described by Mr. Swinton, p. 82, 87.
INDEX.

Williams, Rev. Mr. account of a remarkable thunder storm, p. 71, 72.

Yellow dies, by means of Indigo, described by Mr. Woulfe, p. 129.

Zebra, a new fish brought over by Commodore Byron, and described by Mr. Tyton, p. 247. A species of perch, 248.

*** The Number of PLATES in this Volume is Twenty-two.

FINIS.
BOOKS printed for Lockyer Davis, Printer to the Royal Society.

1. LEONARDI PLUKENETII Opera Botanica; voluminibus quatuor comprehenditis, viz. Phytographia, Almagest in Botanicum, Mantissa, Amathetum Botanicum; brevi illustri illustrorum & minus cognitorum icones; Tabulis sequentibus CCCLIV. summam diligentiam elaboratae. 4to. Price 4l. 4s.

3. An Abridgement of the Philosophical Transactions, from the Institution of the Royal Society in 1665 to the Year 1750; by Lowthorp, Jones, Eames, and Martyn, 12 vol.

4. The Philosophical Transactions at large; from the end of the above Abridgement in the Year 1750, to 1772; 20 vol.

5. The History of the Royal Society of London, for improving of Natural Knowledge, from its first Rife: Being a Supplement to the Philosophical Transactions, in which the most considerable of those Papers and curious Experiments, communicated to the Society, when the Philosophical Transactions were not regularly carried on, are inserted in their proper Order: Together with a short Account of the Lives of the most eminent Members subjoined. By Thomas Birch, D. D. Secretary to the Royal Society. 4 vol. 4to. with Plates and Figures. Price 1l. 11s. 6d. in Sheets.

6. Dr. Birch's Collection of the Yearly Bills of Mortality, from 1697 to 1758 inclusive. Together with several other Bills of an earlier Date. To which are subjoined, as a Specimen of the Use which may be made of them, 1. Natural and Political Observations on the Bills of Mortality, by Capt. John Graunt, F. R. S. 2. Sir William Petty's Essay on Political Arithmetic, concerning the Growth of the City of London; with the Measures, Periods, Causes, and Consequences thereof. 3. Observations on the past Growth and present State of the City of London, in 1757, by Corby Morris, Esq; F. R. S. 4. A Comparative View of the Diseases and Ages, and a Table of the Probabilities of Life, for the last Thirty Years, by James Postlethwayte, Esq; F. R. S. 4to. 10s. 6d.

7. Bibliotheca Literaria: A Collection of Inscriptions, Medals, and Small Tracts, Critical Dissertations, &c. communicated by several learned Persons. 4to. 6s.

8. s'-Grave's Mathematical Elements of Natural Philosophy, by Dr. De Saulgières, 6th Edit. with 127 Copper-plates, 2 vol. 4to. 1l. 16s.

9. Sir Isaac Newton's Treatise on the Quadrature of Curves, and Analysis by Equations, translated, with a Commentary accommodated to the Capacity of Beginners. By Professor Stewart. 4to. 12s.

10. Sir Isaac Newton's Observations on Daniel and Apocalypse, 4to, 4s.

11. Dr.
11. Dr. Halley's Tabula Astronomicae, with the Precepts, both in Latin and English. 4to. 1 l. 1s.
12. Robertsoni Thesaurus Linguae Sanctae, five Concordantiale Lexicon Hebraico-Latino Biblicum. 4to. 12s.
13. Albin's Natural History of Birds and Insects, finely engraved and coloured, 4 vol. 4to.
14. Memoirs of Milton, with some curious Historical Pieces. By Mr. Peck. 4to. 6s.
15. Milton's Memoirs of Oliver Cromwell, with curious Historical Pieces. Published by Mr. Peck. 4to. 6s.
16. Capt. Dobbs's Account of the Countries adjoining to Hudson's Bay; their Situation, Climate, Trade, Navigation, &c. with an Abstract of all the Discoveries that have been published of the Islands, &c. in the Great Western Ocean; Vocabularies of Indian Languages, &c. 4to. 5s.
17. Ellob's Rudiments of Grammar for the Saxon Tongue. With an Apology for the Study of Northern Antiquities. Very useful towards the understanding our ancient English Poets, and other Writers. Being the only Saxon Grammar in the English Language. 4to. 2s. 6d.
18. Fossilia Hannoniensia: Colle&ta, & in Museo Britannico deposita, a Gottavo Brander. N. B. These Fossil Shells collected in the County of Hampshire, and for the greatest part wholly unknown to us, are exquisitely engraved; a Latin Description given by Dr. Solander, and a preface Account in Latin and English. 4to. 10s. 6d.
19. A Natural History of Fossils, upon a new System. To the Descriptions are added historical Facts, and critical Observations. By Mr. Da Costa. 4to. 12s. 6d.
20. The New Observations of Two Swedish Gentlemen, on Italy and its Inhabitants, written originally in French. By M. Grosley, F. R. S. and Member of the Academies of Inscriptions and Belles Lettres. 2 vol. 8vo. 10s.
22. A Voyage to South America, by Don Geo. Juan, and Don Ant. de Ulica; the third Edition, with the Notes and Remarks of Mr. John Adams, who resided several Years in those Parts, 2 vol. 12s.
23. The Roman History from the Foundation of the City of Rome to the Destruction of the Western Empire. By Dr. Goldsmith. In two volumes, 8vo. 12s.
24. The History of Paraguay; containing, among many other new, curious, and interesting particulars of that country, a full and authentic account of the establishments formed there by the Jesuits, from among the savage natives, in the very centre of barbarism; establishments allowed to have realized the sublime ideas of Fenelon, Sir Thomas More, and Plato. Written originally in French by the celebrated Father Charlevoix. 2 vol. 8vo. 10s.
25. A Specimen of an Etymological Vocabulary, or Essay by means of the analytic method, to retrieve the antient Celtic. To which are added some Additional Articles, 5s in boards.
26. A Journey from London to Genoa, through England, Portugal, Spain, and France; by Joseph Baretto, Secretary for Foreign Correspondence to the Royal Academy of Painting, Sculpture, and Architecture, 4 vol. 8vo. 10s. in boards. N. B. An Edition of this work is elegantly printed on royal paper in two volumes, Quarto, price, in boards, 2 l. 3s.
